U.S. Permanent Resident — Outstanding Professor/Researcher

SUMMARY

Machine Learning Research Scientist with expertise spanning continual learning, memory consolidation, sequential modeling, statistical machine learning, and signal processing. My fundamental research investigates how intelligent systems can continuously compress experience into useful memory, retain knowledge under distribution shift, and achieve long-range context without storing all past data. Building on extensive experience in biomedical signal and image processing, physiological time-series analysis, and statistical modeling, I develop clinically grounded AI methods for medical imaging, uncertainty calibration, and explainable machine learning. Author of 16 publications with 250+ citations across IEEE TPAMI, TMLR, CoLLAs, and biomedical venues.

EDUCATION

Johns Hopkins University, Baltimore, MD
PhD, Biomedical Engineering, 2024
MS, Biomedical Engineering (earned en route to PhD)

Bangladesh University of Engineering and Technology, Dhaka, Bangladesh
MS, Electrical Engineering, 2019
BS, Electrical Engineering, 2017

SELECTED PEER-REVIEWED PUBLICATIONS (4 of 16)

1. **Dey, J.**, Srivastava, S., Lerner, I., Kanan, C., & Kudithipudi, D. (2026). *SHARP: Sleep-based Hierarchical Accelerated Replay for Long-Range Non-Stationary Temporal Pattern Recognition*. **Conference on Lifelong Learning Agents (CoLLAs 2026)**. **Selected for oral presentation** (8 oral papers out of 35 total accepted papers).
2. Vogelstein, J. T.*, **Dey, J.***, Helm, H. S., LeVine, W., Mehta, R. D., Tomita, T. M., ... & Priebe, C. E. (2025). Simple lifelong learning machines. **IEEE Transactions on Pattern Analysis and Machine Intelligence**. (**Co-first author with PhD advisor; corresponding author**)
3. **Dey, J.**, Xu, H., De Silva, A., & Vogelstein, J. T. (2025). Simple Calibration via Geodesic Kernels. **Transactions on Machine Learning Research**.
4. Liu, T*, **Dey, J.***, Xu, B*, Bridgeford, EW, Alldritt, S, Nenning, K-H, et al. (2026) Statistically valid explainable black-box machine learning: applications in sex classification across species using brain imaging. **PLoS One** 21(4): e0346575. (**Co-first author**)

SKILLS

Machine Learning: Multimodal Continual Learning, Memory-Augmented AI, Agent Memory, Long-Range Sequence Modeling, Streaming Learning, Transfer Learning, Representation Learning, Uncertainty Quantification, OOD Generalization, Interpretable AI, Neurosymbolic AI, causal inference
Healthcare & Biomedical AI: Clinical Decision Support, Medical Imaging, Ultrasound RF Reconstruction, Biomedical Signal Processing, LLM-based Clinical Reasoning, Trauma AI, RAG, Causal Analysis, HIPPA, IRB
Programming: Python, SQL, R, MATLAB, C/C++
Frameworks & Libraries: PyTorch, TensorFlow, scikit-learn, NumPy, SciPy, pandas, LangChain, OpenAI API, Hugging Face Transformers, Pydantic

Tools & Infrastructure: Git, version control, unit testing, Docker, CUDA, AWS, Azure, CircleCI, Codecov

WORK EXPERIENCE

KorGuard | Remote
Chief Technology Officer (Interim) | October 2026 – November 2026

- **AI Privacy & Security:** Leading development of privacy-preserving AI systems that detect PHI, legal PII, and sensitive legal entities across LLM and agent workflows; accelerated OCR-driven PHI document scanning by **~2×** within the first three working days.
- **Legal AI:** Delivered a pilot-ready detection and de-identification model within two weeks of joining, covering **22 entity types** and **~28K adversarial examples**; developed an **AI-assisted reinforcement learning loop** with human-supervised reviews at fixed epoch intervals.
- **Engineering & Reliability:** Established staging, PR review, regression testing, and issue-tracking practices and strengthened the pipeline through systematic reliability testing and team-wide break-testing.

NuAI Lab, UTSA | San Antonio, TX
Postdoctoral Research Scientist(Computer Engineering) | July 2024 – September 2026

- **Sleep-Inspired Foundation Model:** Developed SHARP, **a novel sleep-inspired memory augmented architecture** for efficient long-range, non-stationary learning in collaboration with neuroscientists and ML researchers, achieving 12.3× faster runtime than a comparable 5M-parameter Transformer; selected for **CoLLAs 2026 Oral**.
- **Clinical AI & LLMs:** Collaborated with trauma surgeons and healthcare startup **Selja Health** on an LLM-based clinical study using **IRB-reviewed data from a seven-center Texas trauma network** to model clinician disagreement, identify high-complexity cases, and prioritize expert review.
- **Cross-Disciplinary Clinical Research:** Advised a multi-center trauma-AI program involving 6 trauma surgeons and $2.5M in secured funding, including work on clinician digital twins and expert-disagreement biomarkers for clinical complexity.

NeuroData Lab, Johns Hopkins University | Baltimore, MD
Graduate Researcher (Ph.D. Candidate) | July 2019 – June 2024

- **Multimodal Continual Learning:** Led DARPA L2M + Microsoft Research research that introduced forward/backward transfer metrics and a continual learning algorithm, SiLLy, outperforming continual-learning baselines across vision, speech, and tabular tasks.
- **Model Reliability & Validation:** Developed uncertainty-calibration methods and rigorously validated model reliability across **45+ datasets** under distribution shift.
- **AI Reliability & Explainability:** Developed statistically valid methods for interpreting causal effects and auditing black-box ML models across biomedical imaging datasets.
- **Open-Source ML:** Developed and maintained open-source ML/statistics packages (Proglearn, hyppo) with unit testing, CI/CD, GPU/cloud computing, and reproducible research workflows.

DSPRL Lab, BUET | Dhaka, Bangladesh
Research Assistant (Electrical Engineering) | January 2016 – July 2019

- **Biomedical Signal Processing:** Developed ultrasound RF reconstruction and adaptive despeckling algorithms using multichannel signal processing to improve diagnostic B-mode image quality.
- **Medical Imaging Simulation:** Built FIELD-II simulations with 3D tissue phantoms and realistic transducer configurations to evaluate imaging algorithms under varying sampling, scatterer density, and noise; resulting in 2 publications.
